

Elementary School

New HVAC Construction

Contract Value: \$1.8 Million

Project Description:

S. P. McCarl & Company, Inc. performed the HVAC construction for a new elementary school. The HVAC scope included approximately 9,000 lineal feet of refrigeration and hydronic piping, 11,000 lineal feet of rectangular and round galvanized, black iron and stainless ductwork. In addition, the following equipment was provided and installed; (2) dual fuel hot water boilers, 8 large roof top units, 4 large air handling units and one make up air unit. Ductwork and piping was fabricated and installed by S. P. McCarl & Company, Inc. Large subcontracts included insulation and automatic temperature control.

Technical Challenge:

The project was performed on an approximately 365 calendar day project schedule with completion required prior to start of school at end of August 2007.
